CATALOGUE OF

GARDEN SEEDS

Of Highest Grade for 1912

Facsimile of Seal on Garden Seeds

The Philips-Thompson Company

The Reliable Cash Seed Store

Fourth and French Streets: WILMINGTON, DELAWARE

Introductory

UR SINCERE THANKS are due to our old customers, not only for their patronage, but for their kind words about us to neighbors and friends, resulting in an ever-widening circle of planters using our high-grade seeds.

We have always been firm believers in the idea, in its universal application, that the best is none too good, and it is particularly true of seeds, on the quality of which so much depends at the harvest-time. After several years' experience, we can say more positively than ever before that the best seeds grown are sold under the brands,

GENUINE GENESEE GARDEN SEED GENUINE CROWN FIELD SEED

From all sides we have received the most flattering testimonials as to the high quality of these seeds. They germinate quickly, grow strongly and produce crops of highest quality and unusually large quantity.

But bear in mind that the seed is not everything; there must be forethought and judgment exercised by the planter in every detail, from the sowing of the seed to the harvesting of the crop. High quality of seed will not guarantee a good crop, but it is a long step in the right direction. One thing is very sure, cheap and poor seed will guarantee a poor crop.

Your attention is especially called to "Our Warranty," on page 1, and to a few remarks on page 19 as to high quality in Field Seed as exemplified by the "Crown Brand."

We take pleasure in presenting to you this Catalogue, which we have aimed to make accurate and useful, and trust it may prove interesting and a practical help to all. We solicit your orders, which will have our best attention in every case.

Very truly yours,

January, 1912.

THE PHILIPS-THOMPSON COMPANY

Remarks to Purchasers

READ CAREFULLY

Terms.—We pay cash for seed and other goods listed in this Catalogue. We therefore sell for cash, except as may be arranged. Intending purchasers, unknown to us, if desiring credit, will be asked to establish their credit-standing through recognized agencies. This is but ordinary business prudence, and should not give offense to any one.

Seeds by Mail.—Orders for packets or ounces will be sent by mail, postage free, at prices given. For larger quantities by mail, include in your remittance 8 cents per pound or 15 cents per quart, to cover postage.

Deliveries.—We deliver by our own teams to city and nearby suburban points, and to express offices, railroad and boat lines, for shipment to out-of-town points.

Special Offer.—On orders amounting to \$5 or more, at prices given in this Catalogue, for any seeds listed on pages I to 17 (Potatoes and Onion Sets excepted), we will prepay freight charges to any point on regular railroad or boat lines in the Delaware-Maryland-Virginia peninsula, and to within 50 miles of Wilmington in other directions.

Free Bags.—The usual custom among seedsmen is to charge for bags, especially seamless bags for field seeds. We will follow this custom on seeds sold in bulk in the usual competitive way. But on all seeds marked in this Catalogue as sold in sealed bags, no charge will be made for the bags.

Seeds in Packets.—So much cheap commission packet seed is sold in these days, of doubtful age and undoubted poverty of quantity and quality, that packet seeds are in bad repute. It is no more than just to this department of our business to state that the seed in our sealed packets is of the same high quality as in our larger sealed bags.

Prices.—Great care has been taken to fix the prices in this Catalogue at the lowest level consistent with high quality. We hope to adhere to them throughout the season; but, should the market require it, we reserve the right to make any changes in price without previous notice.

Vegetable Seeds for 1912

Our Warranty. On the first cover page of this Catalogue is a facsimile of the seal used on bags containing Genuine Genesee Garden Seed. The seed put up and sold under this seal is guaranteed as to quality, so far as it is possible to guarantee any product that must pass through many human hands and be liable to the mistakes thereof. Seed can not be turned out by machinery and be practically perfect. Nature and man are the factors in the production of seed and its preparation for market, and both have their off-days when things go awry and the work is mussed. There can not be greater care than is taken to avoid mistakes in the growing and marketing of the **Genuine Genesee Garden Seed**; yet mistakes are possible, and we can bear the burden of them only to this extent:

If any one has bought a bag of the Genuine Genesee Garden Seed under an unbroken seal, has planted the seed and found it to be not as represented, and not satisfactory, we will either refund the money or will replace the seed with other seed of equal value either of the same or any other variety the purchaser may select.

Further than this we can not go. We can not guarantee a crop nor be responsible beyond the value of the seed sold. We rely on the honesty of our customers not to make unjust claims, and, on the other hand, we will be liberal in the treatment of all cases of crop failure and unsatisfactory results.

Asparagus

One ounce to 50 feet of row

Enrich the soil with liberal applications of well-rotted stable manure. Sow the seed early in the spring, in drills I foot apart, and thin out the small plants to about 3 inches apart in the row. The next spring transplant them into a bed in rows 18 inches apart, 9 to 12 inches apart in the row. Keep the ground free of weeds and well cultivated, especially the first two years. It will require three years to get the bed well established, and it can then be counted on for twenty years' bearing. In addition to rich compost, or stable manure, apply annually our Special

bearing. In addition to rich compost, or stable manure, apply annually our Special Asparagus Salt, ten bushels to the acre.

Below we list the four varieties of Asparagus that we consider the most desirable. Growers can not fall to get good results by planting any one of the four; but in our opinion the Genesee Thick-Stem takes the lead on all points. This variety is of French origin. The shoots are extra-large, tender and fine-flavored, and will always bring top market prices. The yield is enormous under favorable conditions and a few acres set to this grand variety will give a larger net income conditions, and a few acres set to this grand variety will give a larger net income

than from almost any other crop.

Price-List of Asparagus Seed and Roots

ble variety	IO	20	60			
Conover's Colossal. An old favorite: shoots						
abundant, but not very large	10	20	50			
MOTE O						

-Owing to the limited demand for Asparagus roots in this market, we do not keep them in stock, but have arranged with our grower to ship our orders immediately by express. Customers should anticipate their wants by at least

Genesee Thick-Stem Asparagus

four days, as usually that time elapses before the roots arrive, and longer if bad weather delays the digging of the roots. Prices of Asparagus roots vary with the market and will be quoted on application. We handle only two-year-old roots of the above varieties. Do not delay placing your order, as our grower is very often sold out before May 1.

BEANS, Dwarf or Bush One quart to 100 feet of row

Plant at intervals of two weeks from May I to August 15. In field culture the rows should be about 2½ feet apart, and in garden culture 18 inches apart. Drop or drill the seed 2 or 3 inches apart to a depth of I or 2 inches.

Genesee Kidney Wax Beans

There are two main types of Bush Beans—Green-podded varieties and Wax-podded varieties. The two classes have many characteristics in common, as to their method of growth and the quantity and quality of product. As the names clearly indicate one class produces green pods and the other yellow, or wax, pods; but with both the main object of planting is to obtain the greatest out-turn of pods that are free from stringiness and toughness when cooked. A few varieties are grown mainly for winter shelled Beans.

In the price-list below and on the opposite page we

have listed the varieties that are most largely planted in this section and give the best results both in quantity and quality of product. While all these varieties are desirable and give excellent results to the planter, there are two varieties, one in each class, that are, in

our opinion, preëminent:

In the Green-Pod class, the GIANT SNAP-SHORT. In the Wax-Pod class, the GENESEE KIDNEY WAX. We recommend these two varieties above all others.

LIMA BEANS, Dwarf, or Bush

Under this head we will list this year only two varieties. There are a few other kinds, but for quantity and quality of product they are not in the same class with the two we recommend —Fordhook, or Dreer's Improved Bush Lima, and Genesee New Century Bush Lima. Both of these varieties grow in true bushform, stand up well and show very little tendency to run. The well-filled pods are borne in great clusters while the Beans have a highly appetizing flavor.

POLE, or RUNNING BEANS

One quart will plant 100 to 175 hills

The various sorts of Pole Beans should be planted a week or two later than the early dwarf kinds. The Limas, especially, should not be planted until the ground is thoroughly warm. Plant in hills 3 feet apart, and 1 or 2 inches deep, five or six seeds to each hill, and thin to three plants to each hill. Beans of a flat shape will come up more readily if planted with the "eye" down.

There are three types of Pole Limas, the round, thick Lima, the very broad, flat kind, and intermediate between these two plants are above to the control of the lima, the very broad, flat kind, and intermediate

between these two, neither as broad as the one nor as thick as the other. We are not partial to the broad, flat Lima, and it is for that reason that we recommend the following two varieties: **Genesee Early Lima** and **Dreer's Improved Pole Lima.** The first-named, though called an early Lima, is good for planting any time of the Lima Bean season, early or late. It has some of the characteristics of the well-known "King of the Garden," but we think it is a decided improvement on it.

BEETS TABLE VARIETIES

One ounce to 50 feet of row

Sow early in the spring as the ground can be worked, and every two weeks for a succession up to the last of July. Sow in well-enriched, finely harrowed soil, in rows 12 to 15 inches apart and 1 inch deep. When well up, thin to about 4 inches apart, the young Beets pulled out being excellent for greens.

The characteristics of a good Beet may be summed up as follows: Good yielder and fine quality; sweet-flavored, crisp, juicy and fine-grained; color, rich blood-red; smooth skin; top and tap-root both small. The varieties that correspond most closely to this description are the Lightning Blood and Crosby's Extra-Early Egyptian for very early planting; Genesee Early Blood and Genesee All-Seasons for medium and late planting. We can conscientiously recommend these four varieties to give the most satisfactory results, and we do not think they are surpassed or even equaled by some other much-talked-of and widely advertised varieties.

STOCK-FEEDING BEETS

Five to six pounds to an acre

No crop equals Sugar or Mangel Beets for feeding stock, especially milch cows, during the winter, keeping them in healthy condition, and inducing a larger flow of milk than can be obtained by twice the cost in dry feed alone. Sow seed from April 15 to June 15 in drills 2 feet apart; afterward thin out to 9 inches apart in the row.

Some growers want roots very rich in sugar with a fair average yield, in which case they can not do better than to plant the **Genesee Improved Sugar Beet**. Others want to obtain an immense yield per acre, without much regard to very high percentage of sugar. This result can best be obtained by planting one or the other of the Giant Mangels, **Genesee Golden Giant Mangel** or **Genesee Red Giant Mangel**, according as one prefers a yellow-fleshed or red-fleshed root. Both of these varieties give splendid results and are highly paying investments for the dairy farm.

BRUSSELS SPROUTS One ounce to 2,000 plants

Sprouts resemble small cabbages growing closely on the stalk of the plant, and are highly esteemed for boiling during the winter months. Plant like cabbage.

Improved Half-Dwarf. (In sealed bags.) Pkt. 5 cts., oz. 15 cts., 1/4lb. 50 cts., lb. \$1.60.

CABBAGE LONG ISLAND GROWN

One ounce will produce 2,000 plants

Sow the seed in hotbeds in February or March, and transplant in the open ground as early as it can be placed in good condition. A month later follow with the second earliest, and in May sow the seed of the winter varieties transplanting them in July. The early sorts can be planted about 2 feet apart each way and the large late varieties. about 3 feet apart.

Selected Early JerseyWakefield. A most valuable early variety. Having few loose outside leaves, the plants may be set very close, and will produce a large crop of cone-shaped, solid heads. Ready to market in about 75 days from sowing the seed.

GENESEE EARLY SOLID. The earliest roundheaded variety, developed by continued careful selection, and is sure to produce deep flat heads, remarkably solid, of superb quality and uniform in color, form and size. Wonderfully free from spreading leaves. Desirable also for late planting.

GENESEE MIDSEASON. A remarkably sureheader, even under adverse circumstances. The heads are somewhat flattened, hard, firm, fine in texture, uniformly weighing about 10 pounds each. Sweet-flavored, has few loose leaves, is a good keeper and shipper, and is a favorite wherever tried, in home- or market-garden.

Danish Ballhead. Produces round heads, not very large, but remarkably solid, finegrained and long-keeping. A great favorite as a winter Cabbage. Our seed is the genuine Danish strain, of unsurpassed excellence, giving satisfactory results.

Genesee Early Solid Cabbage

Perfect Late Flat Dutch. The Flat Dutch is so well known as not to need description. The strain we offer has been developed by careful selection and cultivation year after year until perfection has practically been reached. Heavier yields and higher quality at every point are the results obtained. One of the best for winter

Perfect Late Drumhead. The same process of development has been followed in perfecting the Drumhead, resulting in the best Cabbage of the Drumhead type. Planters may rely on the Perfect Late Drumhead and the Perfect Late Flats Dutch (both kinds sold in sealed bags only) as the surest basis of success for their winter Cabbage

GENESEE NEW SAVOY. So distinctive that it holds a place of its own in public esteem. The consumer who wants Savoy Cabbage can not be put off with anything else. Grow for him the Genesee New Savoy. It is the best

Mammoth Rock Red. This is the best strain of Red Cabbage. In size of head, in quality an productiveness it surpasses all other varieties of this type. The only red variety now planted to any extent.

Genesee Early Prize Cauliflower

CAULIFLOWER

One ounce for 2,000 plants

An extra-rich soil is essential for the successful cultivation of this delicious vegetable. Plant and cultivate the same as for cabbage, watering liberally during dry weather. Liquid manure is beneficial. This crop pays splendidly if given careful attention.

GENESEE EARLY PRIZE. (In sealed bags.) The earliest and most reliable variety. A sure header. Under favorable conditions sure header. Under favorable conditions every plant will form a large, solid, perfect head of the finest table quality. It is desirable to plant this variety in succession throughout the season, as it is equally good for early or late planting. ½pkt. 10 cts., full pkt. 25 cts., oz. \$3.

Early Snowball. Good, but not equal to above.

Full pkt. 25 cts., oz. \$2.50.

CARROT One ounce to 100 feet of row

Sow the seed in finely cultivated ground as soon as it becomes warm and settled in the spring. In garden planting, put the seed half an inch deep in rows 15 inches apart, and thin to about 5 inches apart in the row. Avoid sowing on newly manured ground, as it thus tends to produce forked roots.

Selected Early Scarlet. This is the best early variety,

either for forcing or for outdoor planting. **GENESEE HALF-LONG.** A handsome cylinder-shaped Carrot, smooth; flesh of fine texture, with little core,

carrot, smooth, lesh of lime texture, with little core, and a heavy producer.

GENESEE THICK-SET. This variety resembles somewhat the last named, but has a larger diameter, hence its name. For planting where the soil is not very deep and the subsoil stiff it has no equal. In fact, it is an exceedingly desirable variety, for all soils and all uses, giving a large out-turn of roots excellent for either table or stable. either table or stable.

Improved Long Orange. A very desirable Carrot for garden or field culture.

CELERY

France

One ounce will produce 2,000 plants

Sow in the open ground as soon as it is fit to work in April. In June or July, transplant into rows 3 feet apart for the dwarf varieties, 4 feet for the larger sorts, and from to keep the ball of soil attached to the roots, and in setting the plant in the trench, press the earth firmly about the roots with the foot. In dry weather, water liberally, using liquid manure occasionally. About August 15, begin earthing up, taking care to prevent the soil falling into the heart of the plant. Continue this until the plants are thoroughly blanched.

Genesee Giant Celery

Improved White Plume. A very early variety that blanches by simply tying the stalks together with a slight earthing up. Its beautiful color, crispness and fine flavor make it a general favorite, and it has no superior for fall and early winter use.

Golden Self-blanching. This wonderfully fine variety, as its name indicates, requires but slight earthing up. It attains a large size, but is very stocky and robust, of a beautiful waxy golden color, sol d and crisp; rich,

nutty flavor. It is decidedly the best keeper of the self-blanching varieties. **GENESEE DWARF GOLDEN.** A superior half-dwarf variety, excelling in productiveness and flavor. It may be planted for early or late crops with equal success, but is especially desirable as a late Celery on account

of its splendid keeping quality.

GENESEE GIANT. The very best of the large Celeries for keeping through the winter. It requires to be well earthed up in order to blanch successfully, but the results are so satisfactory that the labor is well repaid. The stalks are broad, thick, crisp, and stringless, of a fine nutty flavor. It makes large and attractive bunches, selling well in any market, all through the winter and even into the spring.

Winter Queen. This variety is well named, as it excels as a long keeper. Even as late as May, when all other Celeries are usually done, it is frequently seen on the market selling at a high price. The plant is beautiful in appearance, of close habit and compact growth, and blanches to a beautiful cream-white.

CORN SALAD

One ounce to 150 feet of row

Sow early in the spring in rows I foot apart. Ready for use in eight weeks. For spring use, sow in September, and winter over exactly as spinach.

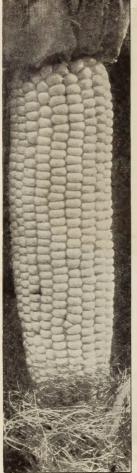

Large-seeded. The best variety. Oz. 10 cts., 1/4lb.

20 cts., lb. 60 cts.

CRESS

A pungent plant, used as salad, and for garnishing.

Extra-curled, or Peppergrass. Sow in the spring very thickly in shallow drills and repeat often, as it soon runs to seed. Oz. 10 cts., 1/4lb. 20 cts., lb. 60 cts. Water Cress. Requires running water or pond, where it grows with little care. Oz. 30 cts., 1/4lb. \$1.

Genesee Early Sugar Corn

SUGAR CORN Eastern Grown

One quart for 200 hills

Plant in hills 3 to 4 feet apart each way, according to the variety, or in drills 4 feet apart, and about 9 inches apart in the row. Be sure to put in plenty of seed, and be equally sure to thin out, so that there will not be more than three stalks to the square yard. Break off all side shoots. The Adams' may be planted early in April, but it is a great mistake to plant the Sugar varieties until the ground is

There are unquestionably many excellent varieties of Sugar Corn, but if we were asked to select two varieties that would cover the whole season's needs and give the most satisfactory results under all conditions, we would unhesitatingly name **Genesee Early Sugar** and **Improved Evergreen.** The first-named produces larger ears than other varieties of early Sugar Corn, in fact nearly as large as the late varieties. It is very hardy, and may be planted almost as early as the Adams' and other like varieties, while it surpasses them so far in quality that they are unsalable as soon as the Genesee Early comes on the market.

The Improved Evergreen is a type of the Stowell's Evergreen that has been developed by following in the footsteps of Mr. Stowell in his evolution of the variety that bears his name. The Stowell's Evergreen, as now generally sold, has deteriorated in some respects, and it was therefore necessary to get back nearer to the original type. This has been accomplished in developing this splendid variety, the **Improved Evergreen**.

CUCUMBER One ounce to 50 hills

Cucumbers succeed best in warm, rich, sandy loam. Do not plant in the open ground until there is a pros-

cucumbers succeed best in Warm, neh, sandy loam. Do not plant in the open ground until there is a prospect of settled warm weather. Plant in hills 4 feet apart each way, preparing previously by mixing thoroughly a shovelful of well-rotted manure with the soil in each hill. When all danger from insects is past, thin out the plants, leaving three or four of the strongest to the hill.

The main uses of the Cucumber are two-fold: To slice as a table vegetable, and for pickling. Most varieties may be used for both purposes, but the two varieties that surpass all others for slicing are the **Improved White**Spine and the **Improved Long Green**. In both the flesh is crisp, tender and fine flavored. They are sure croppers and, in fact, excel in all desirable points. The fruit of both varieties, and especially the latter, also makes fine pickles when pulled half-grown. The best variety to plant for pickles only is the **Genesee Pickle**. It produces the "perfect pickle," slender, medium length, crisp, juicy, and a particularly appetizing flavor. If the fruit is picked when it becomes the right size, the vines will continue bearing through a long season and the yield will be enormous.

EGGPLANT

One ounce for 1,000 plants

Sow early in the spring in hotbeds, or in window-boxes, and plant out after the weather becomes warm and settled, from 2 to 3 feet apart.

GENESEE EARLY BEAUTY. (In sealed bags.) A variety of recent introduction that bids fair to displace every other kind. It is extremely early, maturing its fruit at least ten days before the New York Improved Large Purple, and thus commands the most desirable market period, while the whole crop comes to full size before being caught by frost. comes to full size before being caught by frost. The skin is throughout a lustrous purplish black, giving great beauty to the large, finely shaped, solid fruit. The plants branch freely near the ground, and grow in broad, sturdy bushes, bearing abundantly. Pkt. 10 cts., oz. 50 cts., ¼lb. \$1.50.

New York Improved Large Purple. A standard variety of good quality. Oz. 35 cts., ¼lb. \$1.20.

ENDIVE

One ounce to 150 feet of row

For early supply sow in April. The main sowings are made in June and July, in rows I foot apart. Thin out to 9 inches apart in the rows. When the plants are grown, gather up the leaves and tie together the tips with a string, thus blanching the inner leaves

Improved Green Curled. (In scaled bags.) Much superior to the old type of Green Curled. The leaves are finely cut and curled, giving the plant a rich, mossy appearance. The large, white heart is fleshy and tender. This variety is equally good for early or late planting and may supersede every other kind. Oz. 15 cts., 1/4lb. 40 cts., lb. \$1.50.

GOURDS

These are plants that have the peculiar characteristic of producing seed-vessels that, when matured and dried, are useful for many household and farm purposes. Japanese Nest-Egg. (In sealed bags.) These exactly resemble the eggs of hens, making capital nest-eggs, as they do not break and are not injured by wet or The vines are quite ornamental. Oz. 20 cts., 1/4lb. 60 cts.

The Dipper. (In sealed bags.) Named for its resemblance to that utensil. The capacity varies from a

or that utensil. The capacity varies from a quart to a pint and the handle is 6 to 12 inches long. Oz. 20 cts., ½1b. 60 cts.

Sugar-Trough. (In sealed bags.) This variety grows somewhat pear-shaped, and, by sawing off across near the middle, large dishes or buckets may be made, holding 2 to 10 gallons each. This shell when dried, is light, but thick and hard, and will last for years. Oz. 20 cts., 1/4lb. 60 cts.

Genesee Green Curled Kale

Genesee Early Beauty Eggplant

KALE

One ounce for 2,000 plants

Sow the latter part of April or early in May, in prepared beds, covering the seed thinly and evenly.

Transplant in June and treat like cabbage. The Transplant in June and treat like cabbage. The varieties are all hardy, and are best when touched with frost.

GENESEE GREEN CURLED. (In sealed bags.) This is the best variety of Kale for productiveness, quality and beauty of appearance. The leaves are beautiand beauty of appearance. The leaves are beautifully curled and wrinkled, of a bright green color, while the plant is hardy and will stand out uninjured through any cold weather not below zero. Oz. 10 cts., 1/4lb. 20 cts., lb. 70 cts.

Dwarf German Green. A well-known variety of good quality. Oz. 10 cts., ½1b. 20 cts., lb. 60 cts.

Green Curled Scotch. A good Kale, but not equal to Genesee Green Curled, described above. Oz. 10 cts., 1/4lb. 20 cts., lb. 60 cts.

Imperial Long-standing. Liked by some growers, but not largely planted. Oz. 10 cts., ¼lb. 20 cts., lb. 60 cts.

KOHLRABI

One ounce to 150 feet of row

A vegetable intermediate between the cabbage and the turnip. Sow seed in May or June, in rows 18 inches apart, thinning out to 8 inches apart in the rows. Culture is about the same as for turnips.

Early White Vienna. (In sealed bags.) This produces early bulbs, rather small, but in great number, while the flesh is white, tender, and of finest quality. The very best of all varieties. Oz. 20 cts., ¼lb. 60 cts.

LEEK

One ounce for 1,000 plants

Sow as early in the spring as practicable, in rows I inch deep and I foot apart. When 6 or 8 inches high, transplant to rows 10 inches apart each way, as deep as possible, so that the necks may be blanched.

Large American Flag. (In sealed bags.) This is a strong-growing variety, producing large, thick stems of mild flavor. A particularly fine market variety, always bringing good prices Oz. 15 cts., 1/4lb. 40 cts., lb. \$1.25.

LETTUCE One ounce for 3,000 plants

The seed may be sown in the open ground in mid-September and transplanted to coldframes as soon as large enough to handle, being wintered over the same as early cabbage. For setting out in the spring, sow the seed in hotbeds in February, or in coldframes in March. For the main-crop, sow every three weeks from April 15 to August 15, in rows I foot apart, and thin out plants to I foot apart in the row.

Genesee Wonderful Lettuce

GENESEE EARLY CURLED. This variety does not form heads, but makes large, compact bunches of light green leaves with finely curled or fringed edges. Its delicious quality and handsome appearance make it the most popular non-heading market variety to come in late in the season after the head Lettuces are exhausted. It is useful also for outdoor planting early in the spring.

Big Boston. This is a fine forcing variety for coldframes during the winter months, as it produces heads of very large size, and succeeds better in a cooler temperature than most forcing strains. The large heads are beautifully blanched and of superior quality. Heads well in the open ground during the cool weather of spring or fall, and is one of the earliest varieties in outdoor culture.

GENESEE BUTTER. A variety of great value along the same lines as the one just described. The heads are not quite so large as the Big Boston, but they are very solid, buttery, white within and beautifully green without. Either the Genesee Butter or the Big Boston, if grown from seed of the Genuine Genesee Strain, sold under the seal shown on the front cover,

may be relied upon to give the utmost satisfaction for winter forcing or early outdoor culture.

GENESEE WONDERFUL, and IMPROVED HANSON are the two best varieties for outdoor culture for the general summer crop. The Wonderful produces the largest heads, and both yield the finest solid heads, with inner leaves exceedingly sweet, tender and crisp, and outer leaves light green and palatable, having no bitter taste, as is sometimes noticed in summer Lettuce. Both are sure headers and slow to run to seed. Neither of them is as desirable for forcing and early outdoor culture as Genesee Butter and Big Boston.

GENESEE ICEBERG. A new variety that has shown splendid results for summer culture. It is unquestionably the most beautiful Lettuce in cultivation. The extremely solid heads are formed by closely infolding leaves, thoroughly blanched by their natural formation and exceedingly tender and crisp, even when matured in the hottest days of summer. Surrounding this head are large, curly leaves of a beautiful light green color.

Big Boston and Genesee Butter Lettuces

MUSKMELON

(CANTALOUPE)

One ounce for 60 hills

Melons thrive best in a moderately enriched, light soil. After all danger of frost is over, plant the seed in hills 4 to 6 feet apart each way, 10 to 12 seeds to the hill. When well up, and all danger from insects is past, pull all but three or four plants. Pinch off the ends of the leading shoots to induce early fruiting.

Of all the varieties of Cantaloupe on the market the two that we consider most desirable, especially for the home garden, are the Improved Jenny Lind and the Genesee Golden Gem. The Jenny Lind is the smaller of the two, and is known by the button that is more or less marked on the blossom end. Both varieties, in their improved strain as here offered, are the highest type of the small, round Melon of the most delicate and delicious flavor and both are good bearers. The most widely known Melon is the Rocky Ford, but we do not consider it the equal, at least for this locality, of the Genesee Golden Gem. There are two varieties of medium size that will give the very best results

Genesee Golden Gem Muskmelon

either for the home- or market-garden, viz.,

Salmon-Flesh Genesee and Green-Flesh
Genesee. Among the large kinds two varieties excel—Montreal Market and Bay View. Both are great bearers and the quality is fine for such large Melons.

WATERMELON One ounce for

Treat the same as cantaloupe, except that the seed should be planted twice the distance apart each way. We have no hesitation in naming the Genesee Sweet as the best Watermelon for the family-garden or homemarket. The rind of this Melon is thin and rather brittle, so that it is not satisfactory for shipping long distances; but for home use and for nearby markets it has no equal. Two excellent Melons for the market-garden, either for the home-trade or for shipping, are the **Improved Dixie** and **Genesee Icing.** They resemble each other except in color of rind, the former being dark green, mottled, and the latter light green, mottled. Both are of excellent quality and desirable in every way. The great shipping Melon is the **Triumph**. The rind is very dark green, and is hard and tough, making it sure to carry long distances without injury. It grows to very large size and its quality is superior to other large Melons.

Price-List of All Varieties of Watermelon Oz. 1/4 lb. Lb. GENESEE SWEET. Oblong, good size, dark green; flesh bright scarlet, solid, sugary.... \$0 10 \$0 25 \$0 75 IMPROVED DIXIE. A good Melon for the home-garden.... 20 60 COLORADO PRESERVING CITRON. The finest for preserving; flesh white, fine grained, 30 1 00

NASTURTIUM One ounce to 15 feet of row

When listed under vegetable seeds, Nasturtiums are intended to be grown for the seed-pods, which, if picked young, make excellent pickles. Plant late in the spring and train on fences or trellises. Very little attention is needed in growing Nasturtiums, as the vines, once started, take care of themselves and grow luxuriantly.

Tall, or Major. (In sealed bags.) Mixed varieties that grow the seed-pods most abundantly. Our strain, while serving this utilitarian purpose, is also highly ornamental in both flowers and leaves. Oz. 10 cts., 1/4 lb. 20 cts., lb. 60 cts.

For greater variety and more vivid colorings, see Nasturtiums, under Flower Seeds.

Mammoth Yellow Prizetaker Onion

ONION

The Onion thrives best in a rather deep, rich, loamy soil. The ground should be prepared the previous autumn by plowing or spading in deeply a heavy dressing of well-rotted stable manure. As early in the spring as possible, work the ground until mellow and finely pulverized. Sow the seed in drills about 18 inches apart. Cover lightly with fine soil and press down with the back of a spade or a light roller; in larger operations use a seed drill. Keep the ground free from weeds, taking care not to cover the bulbs with dirt or disturb them by too close or careless working.

There are two methods of growing Onions. The most common method is to grow the small Onions, or "sets," one year, winter them over and put out these sets the next season. The other method, which is rapidly coming into favor, is to produce the large Onions in one season direct from the seed. As the growing of the sets is a business of itself, and is done on a large scale in certain localities, it is customary for most planters to buy their sets each season, as it is found to cost less than to undertake to grow them on a small scale.

To grow sets, sow in drills 30 to 40 pounds of seed to the acre. If sown thinner the bulbs will grow too large. The best varieties to plant for sets are the Yellow Dutch, Improved Silverskin, and Early Red. These resemble each other in everything except color. Gather the sets in the early fall, and winter over by spreading thinly on a dry floor, giving plenty of ventilation.

To grow large Onions direct from the seed, sow 5 to 6 pounds to he acre. After the plants are well set, thin on to about 3 inches apart in the row so as to give the bulbs space to grow to full size. The yield will be enormous

on rich ground if the right varieties are planted. The best varieties to plant for this purpose are the **Genesee Yellow Globe, Genesee White Globe,** and **Red Wethersfield.** All three varieties are of the very finest quality, produce immense crops of bulbs that will keep till the next season, and differ mainly in the color of the outside skin. There is also a slight divergence in form, the yellow and white are perfect globe shaped, while the red is somewhat flattened in shape. Then there are two varieties that are planted for fall and early winter use, viz., the **Mammoth Yellow Prizetaker** and **Mammoth Silver King.** These produce immense Onions of the finest form and mild flavor, but are not long keepers. They should, therefore, be disposed of by the middle of the winter.

OKRA

One ounce for 100 hills

Sow late in the spring in drills 3 feet apart, and thin out to from 9 to 12 inches apart. Or they may be raised in hotbeds and transplanted. The pods, when young, are excellent for soups and stews.

Dwarf Green Prolific. (In sealed bags.) An excellent variety of stocky growth; wonderfully prolific and much earlier than the taller varieties. Pods of good size and fine quality. Oz. 10 cts., 1/4 lb. 20 cts., lb. 60 cts.

Perfected Mammoth-Pod. (In sealed bags.) A new variety of exceptional merit, producing pods of unusual length, of fine color, form and quality. The pods are so thickly set on the plants as to make the yield extraordinary. Oz. 10 cts., 1/4lb. 25 cts., lb. 80 cts.

Genesee Large Sugar Parsnip

POTATOES

The importance of frequent renewal of seed for successful Potato growing is so well understood by progressive farmers that they seldom plant their home seed, but renew it every season. For this climate seed Potatoes should be grown in the far north, and the **Genuine Geneses** stock is the highest type of this northern-grown seed.

For early planting in sandy and light loam soils there is no variety quite equal to the **Extra-Early Genesee**, a round, white Potato, with smooth skin and shallow eyes, cooking dry and mealy at the very beginning. It gives a big yield of best, marketable size, with few seconds. For heavier loam soil verging on to clay loam, we recommend the **Early Bovee** as the most satisfactory both as to quality and quantity of yield. For medium- and main-crop planting there are two varieties that take the lead—the **St. Lawrence Prize** and **Pride of Vermont**. These are not so well known as some other varieties, but

PARSLEY

One ounce to 150 feet of row

Sow thickly early in April in rows I foot apart, covering lightly with fine soil; thin out the plants to 6 inches apart in the row. As the seed is very slow to germinate, sometimes taking three to four weeks to come up, it is well to soak it a few hours in tepid water just before sowing. For winter use protect in a frame or light cellar.

GENESEE MOSS CURLED. (In sealed bags.) A handsome and distinct variety, beautifully crimped and curled. The plant is of a very robust and free growth, yielding a large quantity of its attractive foliage. It is the best kind for either private or market-garden. Oz. 10 cts., 1/4 lb. 20 cts., lb. 60 cts.

PARSNIP

One ounce to 200 feet of row

Sow as early in the spring as the weather will permit, in drills 15 inches apart, covering with fine soil half an inch deep. When well up thin out to about 6 inches apart in the row. The Parsnip is perfectly hardy, and may remain in the ground during the winter; indeed the flavor is improved by frost.

GENESEE LARGE SUGAR. (In sealed bags.) A wonderfully fine strain, resembling the Hollow Crown, but producing a shorter root of larger diameter. It is a very heavy cropper and of excellent sweet quality. Oz. 10 cts., 1/4 lb. 20 cts., lb. 60 cts.

Hollow Crown. The old standard variety. Oz. 10 cts., 1/4 lb. 20 cts., lb. 50 cts.

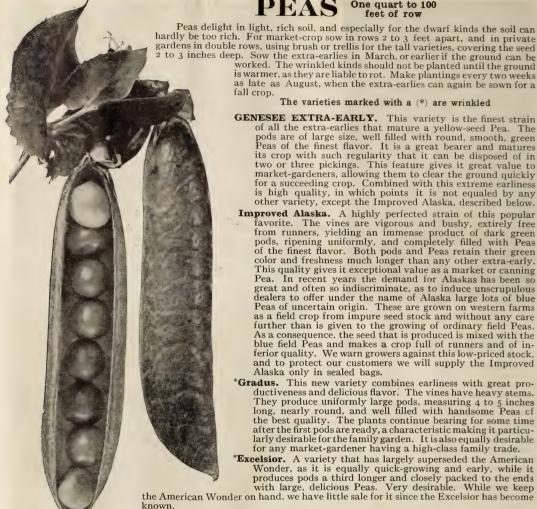

Early Bovee Potatoes

we are so sure of their great merit that we can almost guarantee either of them to give perfect satisfaction in every respect, both as to quality and yield. (Owing to a very short crop this year, prices are necessarily high.)

Gradus Peas

One quart to 100 feet of row

2 to 3 inches deep. Sow the extra-earlies in March, or earlier if the ground can be worked. The wrinkled kinds should not be planted until the ground is warmer, as they are liable to rot. Make plantings every two weeks as late as August, when the extra-earlies can again be sown for a

fall crop.

The varieties marked with a (*) are wrinkled

GENESEE EXTRA-EARLY. This variety is the finest strain of all the extra-earlies that mature a yellow-seed Pea. The pods are of large size, well filled with round, smooth, green Peas of the finest flavor. It is a great bearer and matures its crop with such regularity that it can be disposed of in two or three pickings. This feature gives it great value to market-gardeners, allowing them to clear the ground quickly for a succeeding crop. Combined with this extreme earliness is high quality, in which points it is not equaled by any other variety, except the Improved Alaska, described below.

Improved Alaska. A highly perfected strain of this popular favorite. The vines are vigorous and bushy, extirely free from runners, yielding an immense product of dark green pods, ripening uniformly, and completely filled with Peas of the finest flavor. Both pods and Peas retain their green color and freshness much longer than any other extra-early. This quality gives it exceptional value as a market or canning Pea. In recent years the demand for Alaskas has been so great and often so indiscriminate, as to induce unscrupulous dealers to offer under the name of Alaska large lots of blue Peas of uncertain origin. These are grown on western farms as a field crop from impure seed stock and without any care further than is given to the growing of ordinary field Peas. As a consequence, the seed that is produced is mixed with the blue field Peas and makes a crop full of runners and of inferior quality. We warn growers against this low-priced stock, and to protect our customers we will supply the Improved Alaska only in sealed bags.

*Gradus. This new variety combines earliness with great productiveness and delicious flavor. The vines have heavy stems.

They produce uniformly large pods, measuring 4 to 5 inches long, nearly round, and well filled with handsome Peas of the best quality. The plants continue bearing for some time after the first pods are ready, a characteristic making it particu-larly desirable for the family garden. It is also equally desirable for any market-gardener having a high-class family trade.

*Excelsior. A variety that has largely superseded the American Wonder, as it is equally quick-growing and early, while it produces pods a third longer and closely packed to the ends with large, delicious Peas. Very desirable. While we keep the American Wonder on hand, we have little sale for it since the Excelsior has become

*GENESEE GEM. A Pea of the Little Gem type, but a great improvement on it, both in quantity and quality of product. A desirable variety for either private or marketgarden.

MEDIUM-EARLY AND LATE PEAS

*GENESEE ADVANCER. An improved strain of the McLean Advancer, having the good quality of the parent stock and an increased yield. These contain sweet-flavored Peas remaining tender an unusually long time. Growers will find this variety a reliable cropper under even average conditions, and the product of such fine quality as to secure the highest market price. It should be planted largely for the medium-early crop.

*GENESEE CHAMPION. Few varieties of Peas equal the Old Champion of England in productiveness and quality. Its one defect as a Pea for general planting is its high growth, necessitating brush or trellis. In this new variety, the Genesee Champion, we have all the merits of the tall Champion, with a vine growing to about half the height, but hardy, robust and vigorous. It produces handsome, dark green pods of large size and in great abundance, filled to the very ends with large Peas of the finest quality. For a reliable staple market variety we believe this Pea will fill a long-felt want.

*Mammoth Sugar Marrow. This fine Pea gives wonderful satisfaction to all who plant it. It bears enormous, handsome pods, filled with large, deep green Peas of the finest quality. It has the hardiness and immense productiveness of the Marrowfat, combined with the high quality of the best wrinkled sorts, a combination long desired by market-gardeners. Unlike the Marrowfat, both pods and Peas retain their green color and fresh quality until entirely marketed.

Wanted a Name: \$25 Reward

We will have for free distribution 125 packages of a New Early Pea, as yet without a name. We want an appropriate name for this variety, and believe that some one of our friends will be able to suggest a name that will exactly fit the case. For full particulars of plan, see the back cover of this Catalogue.

Price-List of All Varieties of Peas

Note.—We had hoped that last year was the culmination of short crops of Seed Peas, but this year is even worse. Many varieties are a total failure, while all the rest are so wofully short that there will be only quarts where bushels are wanted. We are listing below only under quarts and pecks, with great uncertainty as to being able to supply any larger quantities.

PUMPKIN

One ounce for 20 or 30 hills

Usually planted in fields of corn or potatoes. If planted in a field to themselves, sow in late April or May, in hills 8 or 10 feet apart. Avoid planting them near other vines.

Of all the varieties of Pumpkin we recommend the following three kinds to grow for table uses: Japanese Pie, Genesee Sweet Potato and Genesee Golden. The first-named resembles somewhat the well-known Cushaw, but the flesh is finer grained, drier and more solid. The second is pear-shaped, the skin light yellow, flesh very thick, creamy white, dry and fine grained. The Genesee Golden we think the best of all. In color and shape it resembles the yellow Hubbard squash and, in fact, the Hubbard squash is one of its parents; but by judicious crossing and careful selection of stock the flesh has been made more solid and fine grained with a peculiarly rich, sweet flavor all its own.

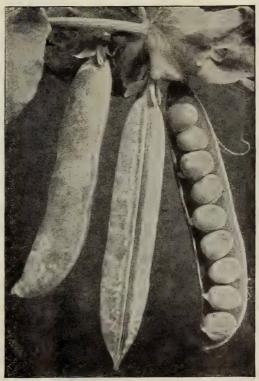

Price-List of All Varieties of Pumpkin

ALL VARIETIES IN CAPITAL LETTERS ARE GEN-UINE GENESEE STOCK

JAPANESE PIE. Like Cushaw, but a straighter, thicker neck; fine. Oz. 10 cts., ½lb. 25 cts., lb. 80 cts.

Scarlet Turnip White-tipped Radishes

RADISH

One ounce to 100 feet of row

A light, rich soil, not recently manured, is best suited for Radishes. For early use, sow in a gentle hotbed in February, giving plenty of ventilation, otherwise they will run to leaves. For successive crops, sow in the open ground from March 15 to September. Quick growth is essential to insure tenderness; therefore, adopt every expedient to force the growth.

RED RADISHES

GENESEE EARLY FORCING. A favorite for forcing in hothouses or for very early outdoor planting. The tops are houses or for very early outdoor planting. The tops are small; the bulbs turnip shaped, very crisp, fine flavored and of attractive appearance. In rich ground they are ready for pulling in 18 to 20 days after sowing the seed.

SCARLET TURNIP WHITE-TIPPED. A fine variety for

the earliest outdoor planting. They are very quick-growing, the tops small, the bulbs turnip shaped, always tender and of excellent flavor.

FRENCH BREAKFAST. An early olive-shaped Radish with characteristics and qualities very similar to the Scarlet Turnip, differing from it very little except in shape and

GENESEE LONG BRIGHT SCARLET. The earliest long red Radish, maturing extremely early for so large a Radish. Attractive form and superior quality make this variety a good seller in all markets, and, therefore, very desirable for market-gardeners' use. Equally good for the homegarden.

CHARTIER'S IMPROVED. A strain of the standard summer Radish that has been developed by careful selection and cultivation. It is a medium-long Radish, of large diameter, tapering to a white tip. Attractive in appearance, standing the summer heat remarkably well, and remaining crisp even under adverse conditions, it should be largely planted for the summer crop.

GENESEE RED WINTER. A beautiful rose-colored Radish, most desirable for late planting. Its shape is half-

long, blunt rooted. Flesh white and firm, remaining crisp a long while, seldom becoming pithy even under adverse conditions.

WHITE RADISHES

GENESEE WHITE BOX. A round Radish of beautiful form and color, very desirable for forcing or for the earliest outdoor planting. It is ready for pulling in three weeks from sowing the seed. The top has few and short leaves, allowing closer planting than usual and larger yield from a given space. The flesh is always firm and

crisp, with fine, mild flavor. In every way an improvement over the well-known Philadelphia White Box.

GENESEE ICICLE. The name indicates the exact form and the bright white color of this beautiful Radish. It is decidedly the earliest of the long white Radishes, being ready to pull in three or four weeks from sowing of the seed. This Radish is not only crisp and tender when young, but retains these qualities until the roots attain full size, so that it will remain in fine condition longer than any other very early variety.

STRASBURG IMPROVED. A white Radish of medium length and large diameter, retaining its crisp, tender quality even under the extreme summer heat. It is, therefore, most desirable for late spring or early summer planting, being unquestionably the best long white Radish for that special purpose.

LARGE WHITE GLOBE. The best turnip-shaped variety of white skin and flesh for summer use. It stands continued heat well, remaining firm and tender under adverse conditions.

GOLDEN GLOBE. Resembling the latter in its marked characteristics of prolific growth and fine quality. The difference is in the skin, which in this variety is a golden brown, and the flesh, which is golden white, almost yellow. No summer Radish withstands heat better than this and maintains its quality of crisp tenderness.

GENESEE WHITE WINTER. Produces roots of mammoth proportions; this does not make them coarse-grained, it is a first the way with large regestables but on the contraver the goal is a first market the grain with large regestables.

as is so often the case with large vegetables; but, on the contrary, the flesh is always crisp, mild and juicy.

SALSIFY, or OYSTER PLANT

One ounce to 50 feet of row

Sow early in the spring, in deep, mellow soil, in rows 15 inches apart, covering 1 inch deep with fine soil. Thin out to 6 inches apart in the row.

Mammoth Sandwich Island. (In sealed bags.) This is the only variety of really great merit. Salsify is a delicious and nutritious vegetable and should be more largely grown for winter use and sale, as it requires no more care and labor than carrots or parsnips. The roots when sliced and fried strongly resemble the real oyster. Oz. 15 cts., 1/4lb. 35 cts., lb. \$1.25.

SPINACH One ounce for 100 feet of row

For main-crop, sow in September, and in exposed places cover lightly with straw or salt hay. For summer use it may be sown at intervals of two or three weeks from April to August. Spinach is best on rich

GENESEE THICK-LEAF. (In sealed bags.) The name clearly indicates the character and quality of this fine Spinach. It is the earliest and quickestgrowing of all the varieties, very hardy, productive and of excellent quality. Oz. 5 cts., 1/4lb. 10 cts., lb. 30 cts., 5 lbs. \$1.25.

Bloomsdale Savoy. A standard popular variety, prolife and of good quality. 1/1b 10 cts. lb. 27 cts.

lific and of good quality. 1/4lb. 10 cts., lb. 25 cts., 5 lbs. \$1.

Long-standing. Slow to run to seed. Desirable for spring planting. 1/4lb. 10 cts., lb. 25 cts., 5 lbs. \$1.

SQUASH One ounce to 40 hills

Like all vegetables of this character, sow only when the weather has become warm and settled. Plant in wellmanured hills, in the same manner as cucumbers and melons—the bush varieties 3 to 4 feet apart each way, and the running kinds from 6 to 8 feet. Plant 8 to 10 seeds to each hill, thinning out, after the danger from bugs is over, to three or four of the strongest plants per hill. In our judgment the following four varieties of the Squash may be selected as the most desirable, and other kinds may be left out of account. For early planting take the two best varieties of the Patty Pan type—Silver Custard and Golden Custard. For summer planting for fall and winter use, take the Genesee Giant Crookneck and Genesee Red Hubbard. Heretofore we have listed several other varieties, but these four are so superior and cover the ground so completely that we have this year omitted all others.

Price-List of All Varieties of Squash Oz. 1/4 lb. Lb. \$0 25 \$0 80 80 25 10 25 80 GENESEE RED HUBBARD. The best of the Hubbard type; fine quality, great producer, long keeper.... 25 80

TURNIP One ounce to 150 feet of row feet of row

For early Turnips, sow as soon as the ground can be worked in spring. For winter use, sow from July 15 to August 31. Turnips are generally sown broadcast, but larger crops are obtained by cultivating in drills 18 inches

apart and thinning to 6 inches.

Of all the white-fleshed Turnips there is none the equal of the Improved Purple-Top White Globe either for table use or for stock-feeding. The roots grow to large size, They will keep the entire winter, retaining their solidity and fine quality. Of the yellow-fleshed varieties, the Golden Ball is an excellent table Turnip of medium size and unsurpassed quality, and the Large Amber Globe is the mate of the White Globe described above and may be planted either for table use or stock-feeding. Of Rutabagas, decidedly the best is the Long Island Rutabaga, which excels in form, size, handsome appearance, solidity, long-keeping quality and rich flavor.

Price-List of All Varieties of Turnip

IMPROVED PURPLE-TOP WHITE GLOBE. As described above. Oz. 10 cts., 11b. 20 cts., lb. 50 cts. GOLDEN BALL. Particularly fine for table use; not a heavy producer. Oz. 10 cts., ½lb. 20 cts., lb. 50 cts.

LARGE AMBER GLOBE. Best yellow Turnip for all purposes; heavy yield. Oz. 10 cts., ¼lb. 20 cts., lb. 50c. LONG ISLAND RUTABAGA. Plant this variety only, as it excels all others. Oz. 10 cts., ¼lb. 20 cts., lb. 50c.

Purple-Top Flat, or Strap-leaved. A well-known early white Turnip. Oz. 10 cts., ¼lb. 20 cts., lb. 40 cts. Cow-Horn. Long, white, grown for feeding stock. Oz. 10 cts., ½1b. 20 cts., lb. 50 cts.

White Egg. An oval-shaped white Turnip; good average quality and productive. Oz. 10 cts., ½1b. 20 cts., lb.

50 cts

Yellow Aberdeen. A large globe-shaped Turnip, grown mainly for stock. Oz. 10 cts., ½1b. 20 cts., lb. 40 cts.

Southern Seven-Top. Grown in the South for winter greens. Oz. 10 cts., ½1b. 20 cts., lb. 40 cts.

Purple-Top Yellow Rutabaga. The old standard va-

riety, not equal to the Long Island. Oz. 10 cts., 1/4lb. 20 cts., lb. 40 cts.

Improved Purple-Top White Globe Turnip

Scarlet Beauty Tomato

TOMATOE One ounce for 1,200 plants

> the seed half an inch deep. When the plants are about 2 inches high they should be set out in boxes, or another hotbed, at the same temperature. About May 15, the plants may be transplanted into the commence of the plants may be transplanted into the commence of the plants may be transplanted into the commence of the plants may be transplanted into the commence of the plants may be transplanted into the plants may be trans be transplanted into the open ground 3 feet apart each way, in hills in which a good shovelful of rotted manure has been mixed. A light, somewhat sandy soil is best suited to Tomatoes, especially for the first crop. On heavy soils, put the plants about 4 feet apart each way.

Of the many different varieties of Toof the many different varieties of 10-matoes, we do not hesitate in naming as leaders the **Genesee Early Dawn**, for early planting, and the **Scarlet Beauty**, for main-crop. Early varieties as a rule produce small, knotty fruit, sour and seedy, undesirable for the home table, unsalable in market; but the **Genesee Early Dawn** is just the reverse of this. It is the earliest large Tomato in cultivation, coming into market as early as the small, acid fruit of the so-called extra-early varieties, and at least two weeks earlier than any other kind its equal in size and quality. This makes all the difference between profit and loss, for

Scarlet Beauty Tomato

there is no glut on this early market, and prices are always good. For main-crop, the vigorous growers right up to frost, and produce in great abundance the large, handsome fruit, deep scarlet, almost cardinal, in color, and so firm and solid that the ripe fruit will remain in marketable condition an unsually long time after picking. After Scarlet Beauty the usually long time after picking. After **Scarlet Beauty**, the next choice for main-crop is the **Perfected Stone**, which is the finest strain of Stone Tomato, much superior to the ordinary type.

Thyme. Very desirable for seasoning, using the leaves and young shoots	05	25

Selected Flower Seeds

In this department we make a specialty of Sweet Peas and Nasturtiums of the superb Genuine Genesee strain. We keep these in quantity and can fill immediate orders of any size. Of other flower seeds we have on hand only packets, but can supply larger quantities at short notice.

SWEET PEAS

Plant early in the spring in ground well enriched by manure the previous season, raking in just before planting three pounds of High-Grade Guano to every 10 feet of row, or five pounds if the soil has not been manured. Do not plant on clayey or gravelly soil.

An ounce will plant 10 feet of single row, a pound 75 feet of double row

With every year, new varieties of Sweet Peas are added to the already long list. Some of these new introductions have real merit and are worthy companions in a beautiful sisterhood. Others are almost identical with old varieties, and being new only in name, are unnecessary additions. Others still are so decidedly inferior to kinds of many years' standing that they may be summarily rejected. In this sifting process it has been found best to drop many old

Spencer Sweet Peas

varieties that have not been wholly satisfactory, either from point of beauty or vigor of plant-life. The most striking and beautiful results are obtained by planting Sweet Peas properly blended as to color. We have discarded all inferior and cheaper mixtures, and now offer only the best, listed under the names of

OUR SUPERB BLEND. Made from the finest varieties of the Genuine Genesee strain, including all new varieties of real merit. Contains 25 per cent of the best Spencer types. An artistic color-blend. Sold in sealed bags only. Large pkt. 5 cts., oz. 10 cts., 1/4 lb. 25 cts., lb. 75 cts.

SPENCER BLEND. Made from Spencer types only. Pkt. 10 cts., oz. 15 cts., 1/4 lb. 40 cts., lb. \$1.25.

NASTURTIUMS Plant late in the spring one ounce to 10 feet of row

Nasturtiums

Every year adds new varieties to this charming annual, some of decided merit, others inferior to the old sorts. The most beautiful and striking results are obtained by planting the fancy mixed varieties in masses, but not the tall and dwarf in the same bed. The seed of the Nasturtium often germinates poorly, and it is therefore necessary to sow plenty of seed; but once started the plants will flourish on almost any soil and in any season, although they do best in a moderately cool and wet climate.

FANCY TALL VARIETIES, MIXED.

This is the **Genuine Genesee** strain of all the most beautiful and vigorous of the tall varieties. Sold in sealed bags only. Mammoth packets, 5 cts., oz. 10 cts., ½ lb. 30 cts., lb. \$1.

FANCY DWARF VARIETIES, MIXED Dwarf growing; of beautiful colors, Sold in sealed bags only. Mammoth

Sold in sealed bags only. Mammoth pkts., 5 cts., oz. 10c., ½1b. 30c., lb.\$1.

Grasses for Special Purposes

Aside from the sowing of Grass and Clover Seed for hay, there are many special purposes to be attained which may be classified as follows:

For Lawns

For Golf-Links—Fair-Green

For Lawns
For Golf-Links—Fair-Green
For Golf-Links—Fair-Green
For Golf-Links—Putting-Green
To secure the desired result in any of these cases, no single variety of Grass Seed will answer. There must be a mixture of many varieties, and in exactly the right proportion, to obtain the greatest success, and this must be based on thorough knowledge and careful trials. We have taken as our basis the accurate experiments made by the Agricultural Department at Washington, extending over a series of years, and the resulting mixtures as listed below are thoroughly dependable. below are thoroughly dependable.

	Brandywine Park Lawn Seed. Made up of selected and recleaned seed of the choicest, fine-bladed Grasses, domestic and imported, to which is added the proper proportion of the best grade of White Clover. It will make a velvety	Qt.	Pk.		Bus.
	lawn from early spring to late fall. The weight per bushel is 50 per cent above the standard\$	25	\$1 50	(21 lbs.) \$	5 50
	Evergreen Lawn Seed. Exactly the same as the last except the White Clover is omitted. One quart to 25 x 25 feet, 2 bushels per acre	20	I 20	(20 lbs.)	4 50
	For Shady Places. The varieties used are those that do well in the shade of trees. As they are shy seeders the price of this mixture is always high. One	2.7	1 60	(20 lbs.)	6 00
	quart to 20 x 20 feet, 3 bushels per acre	25	1 00	(20 108.)	0 00
	the purpose can be made. One quart to 20 x 20 feet, 3 bushels per acre	25	1 50	(20 lbs.)	5 50
	Golf-Links—Fair-Green. Less expensive and stronger-growing Grasses are used in this case. It makes a permanent sod withstanding the hardest use. One quart to 25 x 25 feet, 2 bushels per acre	20	I 10	(20 lbs.)	4 00
	Permanent Upland Pasture. Made up of varieties that are nutritive to stock of all kinds, and stand the test of dry weather in the naturally dry upland	-		(3 - 221)	4 00
	soil. One quart to 25 x 25 feet, 2 bushels per acre	20	I 10	(20 lbs.)	4 00
	different conditions and, therefore, requiring entirely different grasses. One quart to 25 x 25 feet, 2 bushels per acre	20	1 10	(20 lbs.)	4 00
	Unfortunately, there is a demand for cheaper Lawn Seed than the kinds described above. We therefore list, but do not recommend, a mixture which				
	may be called Philadelphia Lawn Seed. A type of Lawn Seed sold by a few Philadelphia deal-				
	ers and highly recommended by them. The weight per bushel indicates its value. One quart to 20 x 20 feet, 3 bushels per acre	15	1 00	(14 lbs.)	3.50
,					

GENERAL LIST OF GRASS AND CLOVER SEEDS

It is a great pleasure to note the broadening of the demand every year for the highest grade of seed. It has been a hobby with us ever since we first introduced the **Genuine Crown Field Seed**, which stands the test of the highest government standard.

Nothing that we sell is a greater source of satisfaction to us than our **Crown Field Seed.** We know that the buyer can get nothing better, and if he gets elsewhere anything as good, he pays the same or more for it.

Every bag of the Genuine Crown Field Seed is sealed with a green label or tag printed as below. None genuine unless thus sealed.

This label (or tag) sealing a package is a guarantee that it contains the

Genuine Crown Field Seed

of the variety named on the face of this package or on the back of the tag

Varieties of Fine-Leaved Grasses

varieties of Fine-Leaved Grasse	S	
The varieties printed below in heavy capitals are the Genuine Crown Field	Seed.	
KENTUCKY BLUE GRASS. A most valuable Grass, suited to almost any kind of soil and climate. The legal weight per bushel of Kentucky Blue Grass Seed is 14 pounds. Note the weight of this Genuine Crown grade, showing its open bushely. Very short crop		Bus. (20 lbs.) \$6 00

Varieties of Clover

The varieties printed below in heavy capitals are the Genuine Crown Field Seed.

The varieties printed below in a source of the contract of the						
WHITE DUTCH. The fine dwarf Clover used on lawns and on pastures where sh graze, although for this latter use Alsike is largely superseding White Clove.					Lb \$o	
White Dutch. Our second grade, sold elsewhere as the "Best"			(5 13		45
ginning to dispute the title for the latter purpose. So much seed of this variety						
is put on the market, of apparently good quality, so far as indicated by a						
casual inspection, but greatly inferior in germinating power, owing to im-						
perfectly developed seeds, that we are now offering our customers only the						
Genuine Crown Seed (sold in sealed bags) unless they insist on something						
cheaper. We will guarantee that 4 quarts of Genuine Crown Seed will give						
a better stand of Clover per acre than 5 quarts of the seed usually sold by dealers, all other conditions being exactly alike. Therefore, as a matter of						
dollars and cents, it really costs less to use Genuine Crown Seed. No	Ot.	Pk			Bus	
Crown Seed is genuine unless sealed with a tag or label as shown on page 19.\$	0 60	\$4		(60 lbs.)		
Medium Red. This is our second grade, although it is called Fancy or Choice in			- 5			
some markets and sold as the "Best" by most dealers.		3	75	(60 lbs.)	14	50
ALSIKE, or SWEDISH. Hardiest of all Clovers. Adapted either for permanent			• 5	, , , , , ,		5
pasture or hay crop. Yields heavily where ordinary red Clover fails to give a						
full crop, either because of too-dry or too-wet soil. Sowing in mixture I quart						
of Alsike to 3 quarts of Medium Red Clover gives excellent results, both in						
the larger quantity and the improved quality of the hay and pasturage. This						
mixture also prevents winter-killing, which Red Clover is much subject to in this latitude.	~ ~	2	90	(60 lbs.)		00
	55	3			-	
Alsike, or Swedish. Our second grade, usually sold as the "Best"		3	55	(60 lbs.)	14	00
ALFALFA, or LUCERNE. A perennial forage plant of strong growth; capable of						
withstanding prolonged drought by reason of the great depth to which the roots penetrate. When once a good stand is obtained it will give three or four						
cuttings each year for many successive years. Do not sow Alfalfa on heavy,						
wet ground. It thrives best on sandy or light loam soils. It may be sown al-						
most any time from April to September, but in this latitude and farther north						
early planting is desirable in order to get a good stand before winter	40	2	80	(60 lbs.)		
Alfalfa, or Lucerne. Our second grade, sold as the "Best" in some markets		2	55	(60 lbs.)	10	00
MAMMOTH RED, or PEA VINE. Valuable for reclaiming exhausted land or						
plowing under as a green manure. It yields an enormous bulk of green proven-						
der. As the name indicates, it is of coarse growth, and not so valuable for				(6 - 11 -)		
pasture or hay as Medium Red Clover	60	4	-	(60 lbs.)		
Mammoth Red, or Pea Vine. Our second grade, commonly sold as the "Best"		3	75	(60 lbs.)	14	50
CRIMSON, or SCARLET. This variety has been called the "Great Nitrogen-						
Gatherer," on account of the large amount of nitrogen that it gathers from the atmosphere and yields up to the soil when plowed under, increasing the						
fertility to a remarkable extent. It may be sown among corn at the time of						
last harrowing or after potatoes or grain when harvested. No cheaper and						
more effective method of manuring the soil can be adopted than by the use						
of Crimson Clover as a soiling crop	30	2	00	(60 lbs.)	7	50
Crimson, or Scarlet. Our second grade, sold generally as the "Best"		I	80	(60 lbs.)	7	00

Prices of all varieties of Clover Seed vary with the market. Those given in the above list are correct at the time of printing this Catalogue, but are subject to change without notice

SELECTED FARM SEEDS

Frequent renewal of seed is desirable with all farm crops, especially when through adverse weather conditions the local product is of inferior quality. The progressive farmer will also need the best seed for planting special crops for green summer forage or for putting away in silos for winter feeding. The varieties described below are selected with a view to the needs of this section and are all of the **Genuine Crown Field Seed** standard and sold only in sealed bags, unless otherwise noted. **All prices subject to market change.**

PEDIGREE SEED CORN. The production of high-grade seed Corn by proper breeding and selection has become a science as exact in its results as the high breeding of animals. When the Corn crop has been especially fine it is comparatively easy to select ears for seed that to the eye are nearly perfect, but the vital question is—Will the grain from these ears transmit their apparently good qualities to the following crops? Certainly they will not unless those qualities have been fixed in the seed by several years' high breeding. Perfection to the eye of any seed is of little value unless it is an inherited perfection and capable of transmission. The value, therefore, of Pedigree Seed Corn is not fixed by the commercial price of the grain, but by the years of labor that it has taken to breed into this seed inherent and transmitting characteristics. This season we offer the following varieties of Pedigree Seed Corn:

Qt.	Pk.	Bus.	Qt.	Pk.	Bus.
			Longfellow Yellow Flint\$0 10		\$2 00
Pride of the North 10	60	2 00	Champion White Pearl 10	60	2 00
Reid's Yellow Dent 10	60	2 00	Red Cob Ensilage 10	45	I 50
Perfected Golden Beauty 10	60	2 00	Southern Ensilage 10	45	I 50

- **SELECTED WESTERN OATS.** These Oats are bought by us in the best western markets from samples of the best grades. On their arrival we give them a thorough cleaning through our special seed-cleaning machinery. Sold in bulk at prices varying with the market. Present price, 75 cts. per bushel of 32 pounds; lower price for larger quantities.
- **JAPANESE BUCKWHEAT.** This is unquestionably the best variety of Buckwheat in cultivation, outyielding the old Silver Hull two to one, and making equally good flour. The plants are very strong growing and vigorous, maturing a week earlier than other varieties, with kernels double the size. (In sealed bags.) Qt. 10 cts., pk. 45 cts., bus. (48 lbs.), \$1.50.
- MAMMOTH RUSSIAN SUNFLOWER SEED. This is decidedly the best variety for all purposes. It produces immense heads and gives a large yield of seed per acre, which makes a good feed for poultry. The leaves are much relished by all kinds of stock. (In sealed bags.) Qt. 10 cts., pk. 50 cts., bus. (25 lbs.), \$1.75.
- **KAFIR CORN.** This plant makes a fine crop of forage if cut in early bloom, and the shoots that then follow will mature a full crop of seed and forage. Both grain and fodder are excellent, the whole stalk tender to the full maturity of the seed, and the yield is very large. This crop is particularly drought-proof, as it will wait for rain with little loss of yield. Within the last few years Kafir Corn has been sown with cowpeas with excellent results, the Kafir Corn holding the peas off the ground and increasing their yield. The two crops may be cut together and make a splendid green forage or silage. Sow I peck of Kafir Corn with I bushel of cowpeas per acre. (In sealed bags.) Qt. 10 cts., pk. 40 cts., bus. (56 lbs.), \$1.25.
- SOUTHERN COWPEAS. There are many varieties of this product of the South, all of the same general character. As a forage crop, or cured for winter feeding, they give excellent results. Another important use is as a soiling crop. They are great nitrogen-gatherers, and when plowed under carry a large percentage of nitrogen to the soil. When sown as early as possible, say the latter part of May, in this latitude, a cutting may be made for green forage and the second growth plowed under. Sow at the rate of 1½ bushels per acre. (In sealed bags.) Qt. 15 cts., pk. 65 cts., bus. (60 lbs.) \$2.25.
- CANADA FIELD PEAS. When sown with oats, these produce a green forage or silage that doubles the production of milk. Sow in March or early April, 1½ bushels each of oats and Peas per acre. The Peas should be sown first and lightly plowed in, or they may be sown on the rough ground after the regular deep plowing and covered by harrowing. About ten days later the oats should be drilled in or sown and harrowed in; the ground should then be rolled. They will be ready for cutting about the latter part of June, when the oats are in milk and the pods formed on the Peas. Farmers who have never sown this crop will be surprised at its large yield. It is highly nutritious food and is relished by all farm animals; in fact, no green forage or silage is so valuable as this for milch cows. (In sealed bags.) Qt. 15 cts., pk. 65 cts., bus. (60 lbs.) \$2.25.
- **SPRING VETCH.** Valuable for soiling or for green manuring. Sow early in the spring. Frequently grown with oats for mowing and feeding to stock. Use at least I bushel of Vetch with 1½ bushels of oats per acre. Qt. 15 cts., pk. 70 cts., bus. (50 lbs.) \$2.50.
- HAIRY, or WINTER VETCH. Recommended for fall sowing with rye which serves as a support. It is hardy in all parts of the country, remaining green all winter and maturing four weeks earlier than scarlet clover. It can therefore be harvested or plowed under and the ground used for the usual spring crop. Sow at least ½ bushel per acre with 1 bushel of rye. Qt. 30 cts., pk. \$1.80, bus. (50 lbs.) \$6.75.
- EARLY AMBER SUGAR CANE. The high value of the northern Sugar Cane for fodder and silage is becoming well known. It may be made to furnish the principal food for stock from August until the following spring. When fed down young as a pasture it grows rapidly again, or better still, cut it as green forage to be fed elsewhere than in the field, and allow the second crop to grow for silage or dry fodder. For the latter purpose it is one of the most valuable crops grown. Like Kafir corn it withstands drought to a remarkable degree Sow in May I peck per acre in drills, or twice as much if sown broadcast. (In sealed bags.) Qt. 15 cts., pk. 70 cts., bus. (50 lbs.) \$2.50.
- **DWARF ESSEX RAPE.** In Great Britain this is universally grown as a forage crop by sheep and cattle farmers, and is fast coming into use in this country as a forage and silage crop or as a pasture for sheep, cattle and pigs, all of which relish it and fatten rapidly by feeding on it. It makes a very rapid growth, covering the surface so densely as to smother out all weeds, and is ready to feed in ten weeks from time of sowing. It is perfectly hardy and withstands drought and extremes of temperature to a remarkable degree, giving succulent food from May to December. The seed may be sown at any time from April to September at the rate of 4 quarts per acre, in drills 18 inches apart or twice as much if sown broadcast. (In sealed bags.) Qt. 20 cts., pk. \$1, bus. (50 lbs.) \$3.50.

Spray Materials and Sprayers

In these modern days, success in fruit- and vegetable-growing is not possible without the judicious application of Insecticides and Fungicides. These are on the market in endless variety, and we have exercised great care in selecting the most desirable and effective, as well as the best machines for their application.

Ask for special prices on larger quantities than quoted below.

Lime Sulphur Solution. Commercially prepared by Government Standard. More effective because more uniform than the home-boiled solution in eradicating San José scale, and a remedy against all sucking insects as well as fungous diseases. We caution fruit-growers against cheap solutions, which are really dear at any price. Qt. can 20 cts., gal. can 50 cts., 5-gal. can \$1.75.

Scale Destroyer. A soluble oil solution wonderfully effective against the San José scale and other diseases due to sucking insects. It has great spreading qualities and works into the crevices and cracks of the bark more surely than the lime-sulphur solution. Qt. can 35 cts., gal. can \$1, 5-gal. can \$3.75.

Slug Shot (Non-poisonous powder). An insecticide that has been used for 25 years and still stands unrivaled for fighting cabbage and tomato worms, potato bugs and other destructive chewing insects. Much more favorable to plant-life than the poison insecticides. 1-lb. carton with perforated top 12 cts., 5-lb. package 30 cts.

Bug Death (Non-poisonous powder). Highly recommended for use against potato, squash and cucumber bugs, tomato, cabbage and currant worms and all other chewing insects. Lb. 15 cts., 3 lbs. 35 cts., 5 lbs. 50 cts., 12½ lbs. \$1.

Arsenate of Lead (Poisonous paste). Coming into general use, and the most effective insecticide. Adheres so firmly to plants and leaves that one application lasts a long while. Lb. 20 cts., 5 lbs. 80 cts.

Paris Green (Poisonous powder). Universally used,

but not equal to the last for many purposes. Lb. 30 cts., 5 lbs. \$1.25.

Improved Bordeaux Mixture (Paste-mix water I to 50). Remedy for potato rot, leaf blight, mildew and all fungous diseases. Qt. 35 cts., 2 qts. 60 cts., gal. \$1.

Quick Bordeaux (Powder-dissolve 10 lbs. in 50 gals. of water). This solution is easily made and is the 4-6-50 standard in its most effective

form. 10-lb. bag 75 cts. Note.—To accomplish two objects with one operation dissolve one of the insecticides in your Bordeaux solution and then apply as usual.

Powdered Sulphur. For making lime-sulphur solution at home and for other purposes. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2.25.

Conkey's Fly Knocker. Best friend of our fly-pestered animals. Qt. 35 cts., 2 qts. 60 cts., gal. \$1.

Tobacco Stems. For fumigating greenhouses and conservatories to destroy the aphis and other insects. 5-lb. pkg. 15 cts., 10 lbs. 25 cts., 25-lb. bag 50c., 100 lbs. \$1.50.

The Century Barrel Sprayer. The best all-round Barrel Sprayer on the market, strong and durable,

and with proper care will last for years. Large, cylinder, mechanical agitator, special fastening for head of barrel, double discharge two leads of hose, all working parts of brass. Price, \$13, including 12 $\frac{1}{2}$ feet of ½-in. hose, Demorel nozzle, and pole-holder. Extra lead of hose, nozzle and holder \$2.50 additional.

The Captain Barrel Sprayer. Medium-priced outfit, not so powerful as the preceding, but unequaled for the Working price.

parts brass, mechanical agitator, clamp for attaching to barrel. Price, \$9, including 12 feet of 1/2-in. hose, Demorel nozzle and pole-holder.

Of the Compressed Air Sprayer type we offer the two best makes, as follows

Lowell Fountain Sprayer. May be used with entire satisfaction for all kinds of spraying, on vines, bushes, tall trees, poultry houses, etc. Very strongly made, easy to adjust and use, many unique and valuable features. Treated in detail in special catalogue to be had for the asking. Made of brass. Price, \$7.

The "Auto-Spray." A Compressed-Air Sprayer of high grade, giving excellent results in all lines of spraying. Being made of brass, it will last for many years if given proper care. Price, with anti-choke nozzle, \$7.75; with stop-cock, \$1 less. 2-ft. brass extension pipes, 45 cts. each.

Admiral Spray Pump. A Bucket Pump of the highest merit. Made entirely of brass, there is nothing to get out of order or wear out; very powerful and gives the best results both in spraying and whitewashing.

Price, complete, \$3.75.

Lowell Continuous Sprayer. An unique contrivance that must be seen and used to be appreciated. Will send a mistlike spray straight ahead, up or down. Just the thing for the small garden and greenhouse or to do the fine, close work

in larger operations. Made of brass, price, \$1.

Lightning Sprayer. A popular little Sprayer that should be in the hands of every poultryman and farmer, as it can be put to so many uses. Made of heavy galvanized iron, price, 50 cts.; made of block 35 cts.

Lowell Powder Blower. Effective in applying insecticides in powder form. Satisfaction guaranteed by the manufacturer. Price, 60 cts.

Dickey Powder Duster. Desirable for applying finely powdered insecticides. Price, 30 cts.

Fertilizers

To return to the soil what the crops take from it is self-evident wisdom. Not to stimulate production, but to repair waste is the true theory of all permanent fertilization and any fetilizer to be really valuable must return to the soil these used-up elements. Animal bone and high-grade potash are the only true bases of reliable fertilizers, and we recommend none other to our customers. To our list of high-grade commercial fertilizers we have added, this year, two of what might be called Nature's fertilizers, viz.: Pulverized Sheep Manure and Canada Hard-wood Ashes. Their very names suggest high value for exhausted soil.

Bowker's Plant-Food. Designed for application to potted plants in the house, highly concentrated, odorless, producing the most striking results. Small pkg. 15 cts., large pkg. 25 cts.

Jappo Plant-Food. Guaranteed to give potted plants a vigorous and healthy growth. Starts up new life in sickly or ill-nourished plants and gives added strength and beauty, with more abundant bloom, to healthy plants. Without odor. Trial pkg. 25 cts., lb. pkg. \$1.

Ideal Lawn Dressing. The most effective lawn fertilizer ever prepared; very quick-acting as well as lasting. Apply 5 to 10 lbs. to 400 sq. ft. 5 lbs. 25 cts., 25 lbs. \$1, 50 lbs. \$1, 75, 100 lbs. \$3, 200 lbs. \$5.50.

Pure Raw Bone Meal. The base of all high-grade phosphates, and a valuable fertilizer used alone. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2, 200 lbs. \$3.50.

High-Grade Guano. The best all-round fertilizer on the market for truck and other crops needing rapid growth and early maturity. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2, 200 lbs. \$3.50.

Special Potato Manure. A phosphate that will largely increase your potato crop. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2, 200 lbs. \$3.25.

Excelsior Guano. Cost moderate; results always satisfactory. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 90 cts., 100 lbs. \$1.50, 200 lbs. \$2.50.

Nitrate of Soda. The best source of commercial nitrogen. Care must be taken in using it alone. 5 lbs. 25 cts., 25 lbs. \$1, 50 lbs. \$1,75, 100 lbs. \$3, 200 lbs. \$5.50.

Muriate of Potash. The source of potash for high-grade fertilizers. 5 lbs. 25 cts., 25 lbs. \$1,50 lbs. \$1.75, 100 lbs. \$3, 200 lbs. \$5.50.

Kainit. A low-grade potash salt used in cheap mixtures. 5 lbs. 15 cts., 25 lbs. 40 cts., 50 lbs. 70 cts., 100 lbs. \$1.10, 200 lbs. \$1.75.

Nova Scotia Land Plaster. The best grade. Cheaper grades are dear at any price. 5 lbs. 10 cts., pk. 25 cts., 25 lbs. 30 cts., 50 lbs. 45 cts., 100 lbs. 75 cts., bus. 75 cts., 200 lbs. \$1.10.

Asparagus Salt. A special salt for use on asparagus beds; dry and very strong. 5 lbs. 10 cts., pk. 20 cts., 25 lbs. 25 cts., 50 lbs. 40 cts., 100 lbs. 60 cts., bus. 60 cts., 200 lbs. 90 cts.

Pulverized Sheep Manure. This is a pure natural fertilizer, and is unsurpassed for any purpose where quick and lasting results are wanted. It is an ideal lawn fertilizer, excellent for mixing with potting soil for greenhouse work and hotbeds and unequaled for general use in the flower and vegetable garden. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 90 cts., 100 lbs. \$1.50, 500 lbs. \$7, ton \$25.

Canada Hard-wood Ashes. Indispensable as a lawn dressing, giving to the grass that deep, rich green color which is so much admired. They should be applied late in the fall or early spring, so that the rains and snows may carry the elements down to the roots of the grass. Also excellent for application to orchards as they return to the soil the very elements that trees require. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 85 cts., 100 lbs. \$1.40, 500 lbs. \$6, ton \$20.

Prices on all Fertilizers by the ton or carload quoted on application

THE LAWN ROLLER

There is no tool more essential to the care of a nice lawn than a good roller. It will prevent the grass dying out and materially assist in exterminating weeds, moles, and other enemies. It will also increase the life and efficiency of the lawn mower to have the ground free from ruts and bumps. The lawn roller is necessary on the tennis-court and on gravel walks.

In the winter, when the moisture-laden soil becomes frozen, it expands just as water does when it freezes. Thus the sod raises up, and the thaw which follows the first warm days of spring allows the soil to settle back, but the grass roots, being much lighter, do not settle back with the same rapidity. This leaves the roots exposed to the air and the heat of the sun, with the result that the grass will die in places unless the lawn is thoroughly rolled during the spring months to bring the roots in contact with the soil again.

DUNHAM ROLLER-BEARING LAWN ROLLERS are the result of years of experi-

ence in the manufacture of lawn and land rollers, and are by far the easiest running on the market. The Dunham is the only hand roller made with the roller-bearing, and will run 40 per cent easier than any other; all but the largest sizes can easily be handled by one man. The face of the rollers is smooth and finished in aluminum; the outer edges are rounded to avoid cutting up the lawn. Sizes not in stock can be procured on short notice. Prices on application.

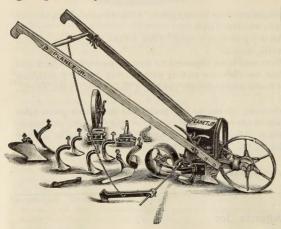

Lawn Roller

THE FOUNTAIN LAWN SPRINKLER

A very popular sprinkler. Makes a fine mist-like spray and distributes the water evenly over the radius covered. It can be moved to any part of the lawn without turning off the water. Made entirely of brass, extremely simple in construction and very serviceable. Price, 75 cts.

"Planet Jr." Farm and Garden Tools

Space will not permit our showing and describing all of the "Planet Jr." tools, but we will send a fully illustrated catalogue, free for the asking, to any one who desires it, and we can supply promptly anything ordered. "Planet Jr." goods are standard machines, the best on the market. In sending your orders to us, you can rely on getting bottom prices.

No. 25 Combined Single-Wheel Hill and Drill Seeder, and Double-Wheel Hoe, Cultivator and Plow. Price, \$13.

Double-Wheel Cultivators

No. 11. I pair 6-inch hoes, I pair 4-inch hoes, 2 pairs cultivator teeth, I pair plows, 2 3-tooth rakes, 2 5-tooth rakes and 2 leaf guards. Price, \$8.50. No. 12. I pair 6-inch hoes, 2 pairs cultivator teeth,

I pair plows and 2 leaf guards. Price, \$6.50. No. 13. I pair hoes only. Price, \$4.50.

Single-Wheel Cultivators

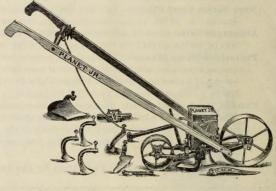

No. 16. I pair hoes, 3 cultivator teeth, I 7-inch rake, I 4-inch rake, I garden plow and I leaf guard. Price,

\$5.50.

No. 17. I pair hoes, 3 cultivator teeth and I garden plow. Price, \$4.50.

No. 17½. I pair hoes, 3 cultivator teeth and I leaf guard. Price \$4.

No. 18. I pair hoes only. Price, \$3.

No. 4 Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow.

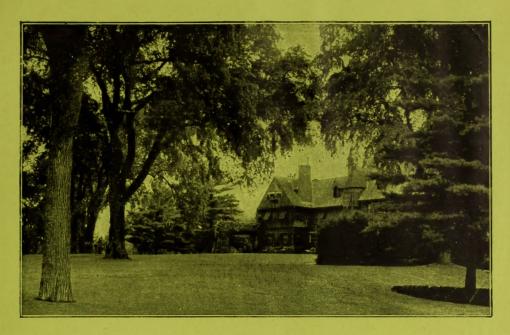

Price complete, \$10.50; as a Seeder only, \$8.50

With this machine seed may be sown in rows, or dropped in hills 4, 6, 8, 12, or 24 inches apart. It opens the furrow, drops and covers the seed, rolls the furrow and marks the next row all at one passage. By the removal of one bolt it can be changed from a seeder to a single-wheel cultivator.

No. 6 Combined Hill and Drill Seeder, Wheel-Hoe, Cultivator and Plow.

Price complete, \$13; as a Seeder only, \$10.50; as a Cultivator only, \$5.75

Intended to do the same work as No. 4 Seeder, but many prefer this tool as it has a higher wheel. The flow of seed from the hopper is very even and accurate, and it can be started or stopped at any time from the operator's position at the handles.

How to Make a Lawn

If the ground intended for the lawn is wet and sour, it should first be thoroughly underdrained. In the autumn, dig or plow the ground to a depth of 6 to 12 inches, according to the nature of the soil. It should then be raked and leveled, to remove stones and get the soil in good tilth, after which make firm with a heavy iron roller. Where the natural soil is too stony, or gravelly, a supply of good mold should be spread over it to a depth of 2 or 3 inches, taking care to select earth as free as possible from weed seed. In March or April, before sowing the seed, the ground should be well cultivated, thoroughly cleaned, and made perfectly level with the iron roller, and as the subsequent appearance of the lawn depends in a great measure on this part of the preparation, it is of the utmost importance that it be well done. During this stage of the work, apply our "Ideal Lawn Dressing" at the rate of 10 pounds to a plot 25x 25 feet and rake it in. The seed may then be sown, using our "Brandywine Park Lawn Grass Seed" at the rate of one quart to a plot 25 x 25 feet, or two bushels to the acre. The best time to sow the seed is in March or April, although good results are also obtained by sowing in September or October. Select a calm day, so that the seed may be distributed evenly over the ground. Finally, pass over it a light roller, to compact the soil about the seed and give it a better chance to germinate.

USE BRANDYWINE PARK LAWN GRASS SEED USE IDEAL LAWN DRESSING

Quantity of Seeds Usually Sown to the Acre

Note:—If the **Genuine Genesee Garden Seed** and the **Genuine Crown Field Seed** are used, the quantities named below may be reduced from 20 to 50 per cent, thus making a saving in cost and giving a far better stand than by using the ordinary grade of seeds.

\$25.00 FOR A NAME

And Some Other Information

We will have for free distribution, this season, 125 large packets (possibly more) of a New Early Garden Pea, for which we want an appropriate name, and other facts about it, as suggested by the blank form enclosed in each packet.

Our Plan Is as Follows:

To each buyer of \$1 worth (or more) of the Genuine Genesee Garden Seeds there will be given one large packet of this New Early Garden Pea, until our supply is exhausted.

Those who receive these packets are entitled to enter into competition for the following premiums:

- \$5.00 to the one who suggests the most appropriate name for the variety, without regard to the value of the report accompanying it.
- \$5.00 to the one who submits the best report in regard to the points specified on the blank form enclosed in each packet.
- \$1.00 each to 15 other competitors who submit reports next in value to the one receiving the first prize.

The award of premiums will be made by an unbiased committee who will not know the names of the competitors. Fill out blanks and return to us on or before August 1, 1912.
